Washington River Protection Solutions President Mark Lindholm speaks during a presentation for a \$33,500 donation. Columbia Basin College

Nuclear technology students at Columbia Basin College in Pasco are getting some help from a familiar source.

Washington River Protection Services donated \$33,500 to the college's program, which offers one-year certificates and associates degrees.

About \$6,000 will pay for scholarships; the rest will pay for new equipment for students.

The equipment purchase includes an Emerson field communicator, a handheld device for teaching instrumentation calibration.

The college also is looking to get a programmable logic controller and related systems to give students experience on industrial computers.
